

Web Development

All's COMP 266 design process includes the use of personas and scenarios, but only in name as the approach communicated to students deviates significantly from the usual use of these techniques.

Titleing

One font, weight, and size for titles, and another for authorship, and another for synapses text.

Dyce Carson

Summary

This process is not going to work on paper! Back to Papport.

Perhaps not!

Each page, though an exception for full-page applications or citations might be made, has the common header with links to the other main web pages.

Article Title AUTHOR
Summary of blog or article and some links!
[DIFFICULTY]

TAG TAG TAG

Article cards link to a full page article.

Articles can n-article - 1
be sorted chronologically.

Final/first Article

Udonavon needs
Emacs documentation

Yanjo needs Linux recommendations

BLOG

When a blog entry card is followed there are no other entries visible, the BLOG button in the header bar is enabled, and the card "expands".

An expanded card has no border, but has padding, of course.

• SUM rating
• Resources
• Classification

Tag, tag, tag, tag, ...
Header Level One (Article body)

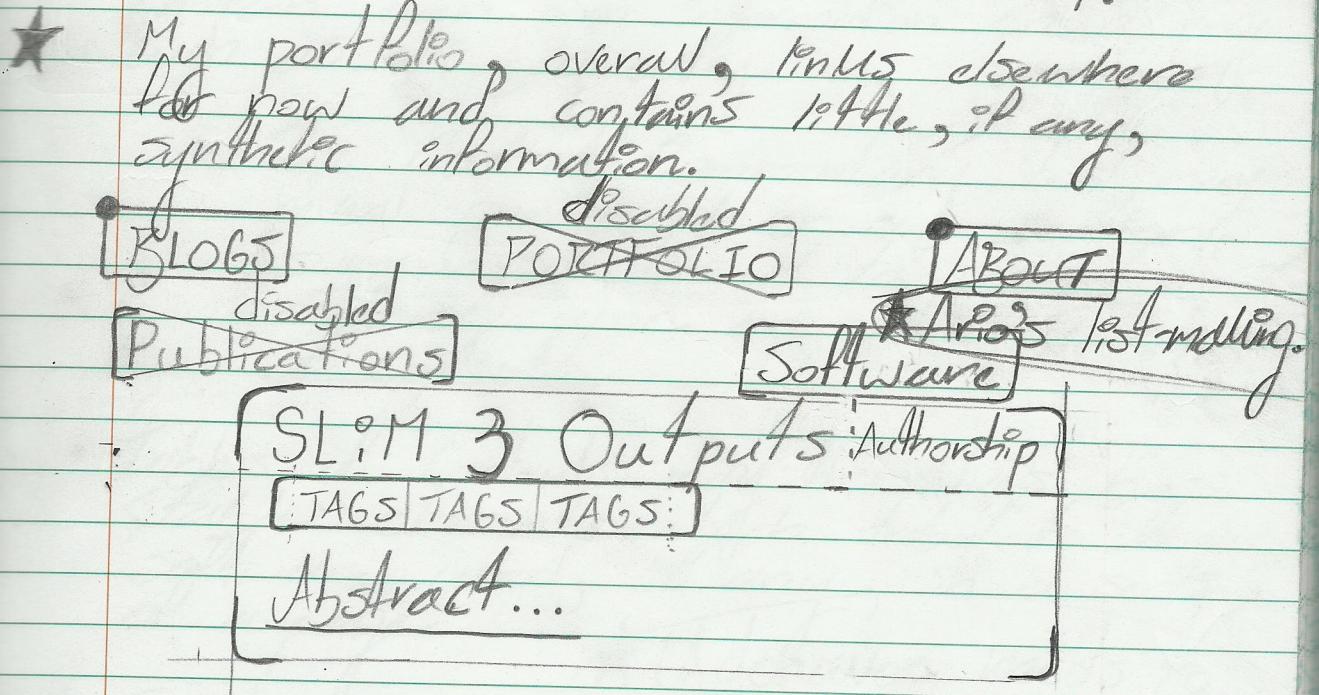

← Padding

- The SUM rating box is only present on pages with an instructional theme.
- Resources, if identified, will be a simple list.
- Classification may be "Instructional" or "Critical"

Portfolio

The portfolio page will contain links to my professional social media, and make my resume available for download.

- * The portfolio itself hasn't been created, but will be populated over time.
- One element of the portfolio that already exists is my ORCID, my GitHub, and my existing contributions to open-source.
- Professional social media includes my LinkedIn and my GitHub, and my ORCID ID. These will link to those profiles.

About and Legal

The About (and Legal) page has information about source material, code availability, copyright and usage information, and links to third party websites and software.

INFORMATION: code licensing; image re-use, modification statements, and source information; who am I; why a blog?; why these design decisions?; and more as I change the design with amendments to these documents.

Tools: a tool which enables or disables a Content Commentary, which can contain even more information on a page such as a blog entry.

- The Content Commentary tool may reveal paragraph or sub-section summaries, used to extend and elaborate upon an entries Table of Contents.
- Tables of Contents may themselves be <table> elements which tabulate the software used, if any, in a section of a page.
- ★ Search bar and results.

Map

HOME / INDEX

- BLOG: links to all entries; of course, with headerbar links to the PORTFOLIO, and ABOUT (LEGAL).
- Site Directory: the site directory contains the links to static versions of every page and lists all of these pages up at logical hierarchy much like this site map.
- PORTFOLIO Publications Software
- ABOUT (LEGAL): links to every piece of software (written reason) used in the production of the website.

Notes made when looking at other websites

- On my blog, the tags are placed at the end of an entry.
- On my blog, the call to action for my GitHub is not anchored along with the Orpcat.
- + Antonio Ortega's personal website, portfolio, and profile website has: a visitor map for the past month (Mercator projection); but the Posts (blog section) is lacking and has multiple fissures;
- + The Portfolio page has a section for original work and another for replicate work.
